Allowable Subject Matter

1. Claims 2-4 and 6-8 of which have been renumbered as 1-6 respectively are allowed.
2. The following is an examiner's statement of reasons for allowance: Regarding claims 1-6, the prior art of record fails to teach of a method of compensating within a receiving endpoint for lost audio packets transmitted across an IP network, comprising the steps of: each interpolated sub packet comprising a weighted average of present and next ones of said sub packets to be played out of the buffer such that first samples of the interpolated sub packet resemble first samples of the next one of the successive sub packets; sub packets of 1 ms duration; and the step of inserting at least one interpolated sub packet between successive sub packets only when the buffer contains less than a predetermined threshold number of sub packets. The closest reference, Fried et al. (U.S. Patent No. 6,735,192), teaches of a method of compensating within a receiving endpoint for lost audio packets transmitted across a network, but fails to teach of the steps of: each interpolated sub packet comprising a weighted average of present and next ones of said sub packets to be played out of the buffer such that first samples of the interpolated sub packet resemble first samples of the next one of the successive sub packets; sub packets of 1 ms duration; and the step of inserting at least one interpolated sub packet between successive sub packets only when the buffer contains less than a predetermined threshold number of sub packets. Additionally, Knappe et al. (U.S. Patent No. 6,603,774), teaches of a method of compensating within a receiving endpoint for lost audio packets transmitted across an IP network, comprising the steps

of: storing a packet buffer of samples as a plurality of sub packets within a buffer; inserting at least one interpolated sub packet between successive sub packets in the buffer; and playing out the sub packets from the buffer, but fails to teach of the steps of: each interpolated sub packet comprising a weighted average of present and next ones of said sub packets to be played out of the buffer such that first samples of the interpolated sub packet resemble first samples of the next one of the successive sub packets; sub packets of 1 ms duration; and the step of inserting at least one interpolated sub packet between successive sub packets only when the buffer contains less than a predetermined threshold number of sub packets.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
